Shaurya Tomer

Forward Deployed Engineer | Full-Stack | Backend | GenAI | Customer Engineering

shauryatomer18@gmail.com | +91 9870805077 | LinkedIn | GitHub | LeetCode | Gurugram, India

Professional Summary

Customer-facing **Implementation Engineer I** with experience taking enterprise problems from **requirements and technical discovery through integration, testing, UAT, go-live, production validation, and troubleshooting**. Strong engineering foundation across **TypeScript/JavaScript, Python, Golang, React, Next.js, Node.js, REST APIs, SQL/PostgreSQL, MongoDB, Linux, and Git**. Built full-stack and AI-powered projects using **Gemini AI, LLM APIs, prompt engineering, and AI-assisted development**. Experienced in breaking down ambiguous problems, debugging production systems methodically, communicating directly with customers, and coordinating with Product and Engineering to drive issues through resolution.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, C/C++, HTML5, CSS3

Frontend: React, Next.js, Responsive UI, Reusable Components, State Management, Server-Side Rendering, HTML/CSS, API Integration

Backend & APIs: Node.js, Express.js, REST APIs, HTTP/HTTPS, JSON, Webhooks, Authentication, CRUD APIs, Backend Services, API Design, Validation, Error Handling

Databases: PostgreSQL, MySQL, MongoDB, SQL, Data Modelling, Joins, Aggregations, Database Integration, Data Validation

AI-Native Engineering: Generative AI, Gemini AI, LLM APIs, Prompt Engineering, AI-Assisted Development, Agentic AI Concepts, Tool Calling, Structured Outputs, Context Management, RAG Concepts, AI Output Validation

Engineering & DevOps: Git, GitHub, Linux, Postman, curl, Application Logs, Docker Concepts, CI/CD Concepts, Cloud Fundamentals, Testing, Debugging, Monitoring, Root-Cause Analysis

Customer & Product Engineering: Technical Discovery, Requirements Gathering, Problem Framing, Solution Design, Technical Scoping, UAT, Go-Live, Production Support, Client Communication, Status Updates, Risk Identification, Technical Documentation

Experience

Implementation Engineer I (Software Systems) — **Apr 2026 – Present**
Exotel — *Gurugram, India*

- Work directly with enterprise customers to understand **business problems, user workflows, technical constraints, integrations, and expected outcomes**, translating ambiguous needs into clear implementation requirements and technical workflows.
- Own customer-facing technical delivery across **requirements, solution configuration, API integration, testing, UAT, go-live, production validation, and post-launch support**.
- Build and validate integrations involving **REST APIs, JSON, webhooks, authentication, PostgreSQL, CRM systems, backend services, and customer applications**.
- Debug production issues methodically by forming hypotheses and analysing **API responses, application logs, SQL/PostgreSQL data, Linux services, configuration, networking, and end-to-end workflows**.
- Reproduce software and integration defects and provide Engineering teams with **expected vs. actual behaviour, reproduction steps, API payloads, logs, database evidence, configuration details, and affected workflows**.
- Collaborate with **Product, Software Engineering, QA, DevOps, Infrastructure, Project Management, and customer teams** to resolve blockers and drive technical issues through closure.
- Perform **functional, API, integration, regression, and UAT validation**, verifying fixes before production rollout and monitoring critical workflows after deployment.
- Support production go-lives by validating **integrations, application configuration, user workflows, data consistency, service health, and production readiness**.
- Communicate technical findings, progress, risks, dependencies, and next actions to both technical and non-technical stakeholders through customer discussions, status updates, documentation, and KT sessions.

Selected Customer Engineering Experience

Aditya Birla Lifestyle Brands – Enterprise Deployment — **2026**
REST APIs, PostgreSQL, CRM Integration, WebRTC, UAT, Production

- Supported an enterprise implementation from **customer requirements and technical discovery through configuration, integration, UAT, go-live, and production validation**.
- Worked across **WebRTC, DID configuration, call routing, CRM integration, Click-to-Dial APIs, JSON payloads, user workflows, backend configuration, and storage integration**.
- Investigated a production integration gap where Click-to-Dial worked through the standard outbound journey but behaved differently through the customer's application workflow.
- Formed hypotheses and compared **API responses, payloads, configuration, logs, SQL data, and end-to-end workflow behaviour** to isolate the failing layer.
- Documented reproducible evidence and coordinated with Product and Engineering teams through fix validation, UAT, and production verification.

Full-Stack & AI Projects

StockLens – AI-Powered Stock Tracking Platform — **2026**
Next.js, React, TypeScript, MongoDB, Gemini AI, REST APIs

- Built a full-stack product supporting **stock discovery, watchlists, portfolio tracking, personalized dashboards, and AI-assisted contextual insights**.
- Developed frontend and backend workflows using **Next.js, React, TypeScript, MongoDB, and REST APIs**, covering UI state, data persistence, validation, API integration, and error handling.

- Integrated **Gemini AI** for contextual insights and iterated on prompts, input context, response handling, validation, and failure scenarios rather than accepting model output without application-level checks.
- Implemented reusable UI components, loading/error states, caching, responsive interfaces, structured API handling, and optimized rendering.
- Used **Git/GitHub** for source control and iterative development while taking the product from initial concept toward a functional full-stack MVP.

CareerConnect – Full-Stack Job Portal **2026**
React, TypeScript, Node.js, Express.js, MongoDB, REST APIs

- Built a full-stack application supporting **job discovery, candidate profiles, resume management, applications, and recruiter workflows**.
- Designed backend workflows and REST APIs using **Node.js, Express.js, MongoDB, authentication, validation, error handling, and structured API responses**.
- Developed reusable React/TypeScript interfaces with **search, filtering, pagination, responsive design, state handling, and API-driven workflows**.
- Applied engineering practices including **Git, modular architecture, testing with Jest/React Testing Library, ESLint, Prettier, and maintainable component design**.

AI-Assisted Workflow Automation **2026**
Python, LLM APIs, REST APIs, SQL, Agentic AI Concepts

- Designed an AI-assisted workflow for converting unstructured technical inputs into **structured tasks, diagnostic steps, and actionable outputs**.
- Explored LLM workflows involving **prompt engineering, structured outputs, tool-calling concepts, context management, deterministic API/database checks, and human validation**.
- Structured the workflow so AI-generated recommendations are verified through **API responses, SQL queries, logs, and deterministic checks** before being treated as valid.

Education

Rajiv Gandhi Institute of Petroleum Technology **2022 – 2026**
B.Tech in Computer Science & Design Engineering *CGPA: 7.42*

Class XII – Science (PCM) **2021**
G.R.M School, CBSE *90.2%*

Class X **2019**
G.R.M School, CBSE *93.2%*

Achievements

- Solved **600+ Data Structures and Algorithms problems** on LeetCode, strengthening algorithmic reasoning, problem decomposition, and debugging.
- Qualified **JEE Advanced 2022**, ranking among the top ∼2.5% of candidates nationwide.
